DISCOUNT CAMERA CATALOGUE

AUG/SEPT '79

From a rather disappointing *photokina* last year came one outstanding new camera, which is now shortly to be available on the UK market.

The Olympus XA is a full-frame 35mm compact, with its own detachable flashgun. It also has a built-in camera case — the door at the front closes over its fixed Zuiko lens. Exposure, as you would expect from any compact, is fully automated; but this automation, unlike its rivals, extends to flash operation. On other compacts the built in flash is of the manual, non-computer type, but the A-11 flash supplied with the XA is fully automatic — you simply turn the aperture selector to 'flash'.

Focusing is by a small fingertip lever, and a coupled rangefinder is incorporated.

The only noisy aspect of the camera is intentional. It's a bleeping self-timer.

Tecno price for the Olympus XA complete with detachable A-11 flashgun is £112.00 including 15% VAT.

CAMERA & LENS SALE SPECIAL!

PLUS REDUCTIONS ON MANY ACCESSORIES AND DARKROOM ITEMS

Without exception we have, for the period of this sale and apart from all other reductions, absorbed in full the June 1979 VAT increase, except for 8% VAT items.

News from

Top Nikon management changes include the retirement of former vice-president, Mr M Fukada, who was responsible for the introduction of the Nikon F. It is anticipated that several major changes will take place in the manufacturing and sales policies of the company. The Nikon EM is the brain-child of a newly-appointed camera designer, and may well signal the beginning of new ideas from the company whose reputation has largely been founded on the big sturdy professional F and F2 cameras.

Ms. Sylvia Faktor, a director of British distributors AICO, has been on a tour of the East including Hong Kong, Peking and Canton. Her camera? A Topcon RM (Pentax K mount).

Dixons, the massive photo retail chain, have established a wholly owned subsidiary called Dixons Japan Ltd, to retail equipment in that country where previously they were represented by Kawapota Ltd.

More from Nikon. Sometime in the future there will be a new Nikkor enlarging lens, 50/f2.8N. They say that optical quality is increased, and that multi-coating will provide better balanced contrast. The aperture scale is illuminated by the enlarger lamp.

LATE NEWS

CHEAPEST NIKON EVER?!

NEW NIKON EM COMPACT 35mm WITH 50/f1.8 E (Case £9.00 extra) **£157.00**

Kensington Tecno

My name's Edward Orr, manager of our new Tecno Superstore at the end of Kensington High Street. We're fully air-conditioned and, although the store is large, the atmosphere is friendly and helpful. A few figures: 2,800 square feet of stock area and half a mile of shelving with

cameras, lenses and darkroom equipment in abundance. Call into Tecno Kensington. We'd like to meet you.

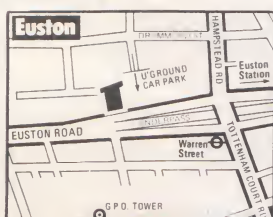

LT bus routes that pass Tecno Kensington:
9, 27, 28, 33, 49, 73.
Green Line: 714, 716.

Euston Tecno

I'm manager of our 326 branch — Paul Barron's my name. This is our longest-established Tecno, and the number of customers seems to increase every day! However, we're trying to maintain the same high standards as ever and, of course, keep our prices as competitive as they

always have been. We're close to Warren Street tube station, so next time you're in the area why not call in?

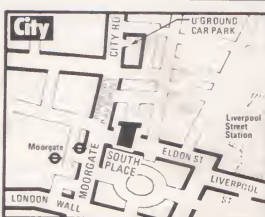

These buses go to Tecno:
7, 18, 24, 27, 29, 30, 134, 137, 176, 253.

City Tecno

NEW

OUR NEWEST TECNO IS STILL BEING FITTED OUT AT THE TIME OF GOING TO PRESS—BY THE TIME THIS CATALOGUE APPEARS WE MAY WELL BE OPEN FOR BUSINESS.

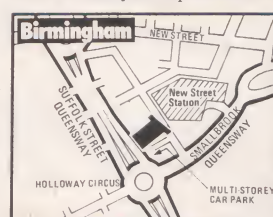

Buses for City Tecno:
21, 43, 76, 104, 141, 214, 271, 279A, 502.

Birmingham Tecno

I'm David Weaver, skipper of Tecno Birmingham. Our branch here in the West Midlands has now been open for nearly 3 years and I would like to thank all of our customers past, present and future for making it such a success. A great many of our customers travel a

long way to shop at Tecno, so may I suggest a quick telephone call beforehand to ensure we have your requirements in stock.

West Midlands buses:
41, 45, 47, 61, 62, 63.
Midland Red bus: 145.

A personal assessment of two classic cameras.

When just about every other camera advertisement claim that their product is 'truly professional', what is the true camera for professionals?

If defined by optical quality alone then virtually any of today's SLR's would qualify with ease. However, depending on your camera for a living means it has to offer something extra, although it's true that many a photographic competition has been, and always will be won on non-professional status equipment.

Above all, the professional camera has to be rugged and reliable enough to carry on working under the most arduous conditions, such as war reportage, where it might not always be treated as well as it should.

Reliability depends primarily on the quality and strength of the camera's construction.

Of course, there are several different areas of professional photography, and a camera suitable for one may not always be suited to another.

There is a particular bias against the use of electronics in cameras. Many pros rule out the use of

justify the amount of usage) but he has to know that these lenses are available so that they may be hired for a specific assignment.

So which cameras can be considered as being truly professional?

Surprisingly, this varies considerably from country to country, for example: The Topcon Super RE, a model which received great acclaim in the USA a few years back, but was hardly heard of on this side of the Atlantic. Similarly, the Minolta XM Motor, a version of the XM specially adapted for Motor Drive was a very popular camera abroad but never received well here. [Note: other motor drive ADAPTED cameras, as distinct from those with the facility to accept a ready built drive, include the Pentax models ES, KM, and K2DMD].

Pentax, Olympus, and, to a lesser extent Minolta, have all enjoyed substantial success, and gained a high reputation in the market of professional photography.

But when all is said and done, no-one would deny that the responsibility for most professional work produced over recent years lies with just two brands: Canon, with their F-1, and Nikon, makers of the F and F2. These will probably be the last two cameras to be marketed which have been built by almost traditional methods. They almost certainly mark the end of an era in 35mm photography.

able, and alternative finders include a low-light metering head and waist-level finder.

The Titanium shutter is speeded from 1-1/2000 and flash synch is at 1/60 second. The CdS meter covers an EV range from 2.5-18 and the focusing screen shows 97% of the actual picture area. Body weight is 820g. The Canon system, one of the most comprehensive ever devised, includes lenses from 7.5mm up to 1200mm, motor drives etc etc.

Nikon's F2, released in 1972 as successor to the legendary F, is probably the most famous and widely used professional camera ever. It has a reputation for reliability that is second to none. The camera is available in three basic forms: with a plain, non-metering prism, with a needle display metering head using CdS cells covering an EV range from 1-17 (F2A), or with an LED display head using silicon cells giving an EV range of -2 to 17 (F2AS).

Like the Canon F-1 the shutter is Titanium foil, and covers 1 second to 1/2000 plus provision for speeds from 1 second to 10 seconds. These very slow speeds are controlled from a dial around the camera's self timer. The interchangeable focusing screen 'sees' virtually 100% of the picture area. Weights are as follows: F2A 830g, F2AS 840g.

Once again, the F2 is merely the basis of the enormous Nikon system, containing lenses from 6mm f2.8 to 2000mm f11, finders, motor drives and hundreds of other accessories.

Is there anything to choose between the two cameras?

Possibly just that indefinable 'feel' which can only be tested by the individual when handling the cameras — it's something which cannot be built in by a manufacturer but it's always there.

35mm SLRs introduced recently tend to be smaller, lighter and use easy-to-manufacture printed circuits and electronic technology, resulting in many more units being produced each year, at correspondingly lower costs. It's easy to see why the Canon F-1 and Nikon F2, individually built and tested through several thousand exposures, cost more than any of the newer SLR models.

PROFESSIONAL SLR?

automatic exposure systems, electromagnetic releases, electronically governed shutter speeds and sometimes even built-in meters, simply because they rely on batteries for their operation. Weston and Lunasix meters are still widely used by professional photographers. Traditions die hard.

Here are one or two vital requirements for a camera to be used by professionals: interchangeable screens. These make longer focal length or very small aperture lenses much easier to use. Motor Drive facilities are a must. Not just for sports and other high speed action, but particularly candids, where a string of almost-identical photographs will more often than not contain that one prizewinning shot.

One of the most important considerations for a professional camera is that it MUST be part of a system which offers a wide range of lenses and accessories which are freely available. A pro will never buy an 8mm fisheye or 2000mm super telephoto (the capital outlay on such lenses could not possibly

The Canon F-1, together with a complete system of lenses and accessories, was launched in 1971. Its meter is built into the body, and the camera is supplied with an eye-level pentaprism. Screens are interchange-

Books on the Nikon System

Nikon/Nikkormat Way - H Keppler 473pp £7.50
Nikon Manual - Morgan Publishing 320pp
Nikon & Nikkormat SLR Cameras - Carl Shipman, includes models up to and including FM/FE £3.50

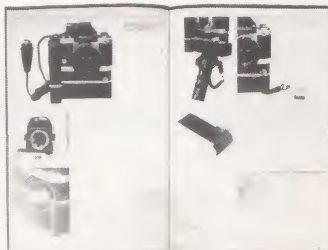

The Nikon Manual

The Nikon Manual covers the following cameras: F2, F2A, F2AS, FM and Nikonos III. As well as separate chapters on all these models, there are additional sections on Nikon F, Nikon EL2, Nikkormat FT2/3, Nikkormat EL and Nikkormat ELW. The Introduction gives a full background to the above range of cameras, tracing models back as far as 1948 and including Nikon 1 and Nikon S series. Published by R Morgan Publishing 320pp.

Nikon lenses fill 70 pages of the Nikon Manual, detailing element/group construction and showing in diagrammatic form the optical layout of each lens. There are complete chapters covering every aspect of Nikon photography - filters, flash, hoods, viewfinders, focusing screens and everything is clearly explained to help you take better photographs. The special chapter on Nikon Motor Drives shows the MD-2 in use and breaks it down in visual form to each component part.

The chapters concerning Nikon cameras themselves contain full specification of every feature of the camera including metering systems and shutter types, and describe which accessories are compatible. Diagrammatic photographs are included, showing exactly where every control is located, and how it operates. For the Nikon owner of old there are chapters on the now-discontinued Nikkormat series, and for underwater photographers there is a complete section on Nikonos III. A comprehensive chapter on the Nikon F2 describes the various finders and focusing screens available. There's a section on the Nikon F cameras.

As well as covering technical aspects, 90 pages of the Nikon Manual are devoted to creative photography. Contributors include Richard Tucker FRPS with a chapter called 'The Art of Seeing', and 'Close-up Photography'. Jorge Lewinski has written a section on modern portraiture, taking the reader through to a description of a full shooting session. Award winner Chris Smith writes about his technique and approach to Sports Photography. All these chapters contain many specimen photographs by their respective authors, and form a complete companion volume in themselves.

THE PUBLISHER'S PRICE FOR THE NIKON MANUAL (PRINTED ON THE JACKET) IS £12. BUT FOR A LIMITED PERIOD ONLY WE ARE OFFERING OUR STOCKS AT ONE THIRD BELOW THIS PRICE.

K1000

£118.00

Case extra £15.60

We still have supplies of this latest Pentax SLR. It is the bayonet version of the Spotmatic, and has similar specification: TTL full aperture metering, speeds 1—1/1000 sec + B, microprism spot focusing, hot shoe. With new 50/f2 SMC-M lens, in chrome.

IMX

Pentax MX

The new professional camera from Pentax, the MX. Claimed by them, in fact, to be the smallest, lightest professional camera available in 35mm photography. It is a true systems camera, with interchangeable focusing screens, motor drive with choice of backs, an autowinder for fast action work without the weight of a full motor drive outfit, and a complete range of optics to meet any requirement.

A few facts. Gallium Arsenic Phosphorus Photodiodes (GPDs) in use for the first time as a metering method. Open aperture, TTL metering, 3-colour LED exposure readout, shutter release button acting as meter switch. Split

screen supplied in wind lever with advance. Hot shoe. Depth of field needle loading.

CAMERA & LENS SALE!

Pentax ME

The Pentax ME was introduced over a year ago and is still the smallest, lightest full-frame 35mm SLR available. Light measurement is by GPD cells, which react faster than any other form of metering cells. The shutter speed is matched to the pre-selected aperture steplessly between 8 seconds and 1/1000 sec. Override is possible by 1 or 2 stops either

and a manual, for flash synch. film loading, 'redie', looking ab. In fact, they take-up of the

Discounts FOR CASH ON HASSELBLAD

Hasselblad 2000FC

Hasselblad 2000FC is the embodiment of the Hasselblad tradition. Fastest speed 1/2000 second, and focal plane shutter (though a between the lens shutter can also be used), hence its designation: 2000FC. Its film magazines, focussing screens, viewfinders and battery cassette in keeping with Hasselblad's philosophy of interchangeability, are common throughout the system. Pre-release button, double exposure prevention signal, shutter speed ring lock, film counter: all are built in. With 80/f2.8 Zeiss T* Planar F lens, A12 magazine and with chrome trim **£1036.80**

We're in the protection business.

Hercules cases have a tough aluminium exterior with reinforced edges. And there's a triple-layer foam filled interior. The foam is pre-cut into cubes allowing it to be easily moulded to your equipment without having to use a knife. Spare inserts are available should you change your outfit. There are black and chrome Hercules cases, and all are supplied complete with strap and locking keys.

HERCULES

SLR LENS SELECTION CENTRE

PLEASE NOTE THAT WE HAVE 1 OR 2 OLD STYLE TAMRON ADAPTALL 1 LENSES IN STOCK AT VERY SPECIAL PRICES. SEE DISPOSAL LIST, p3.

TAMRON

CAMERA & LENS SALE!

Recently been introduced into the market, the lenses has been of scales designed with both help to make

Focusing and zooming is quicker: the 70-150 zoom requires only a 640° twist for focusing, and a 790° twist to cover the complete zoom range. Two close-focusing fixed focal length lenses are now included in the range. Finally, the mount system has been updated to allow a Tamron lens of any maximum aperture to be used with the mount for your SLR.

MITSUKI

new-series automatic lenses

Three brand-new Mitsuki lenses are now in stock in all fittings: 24mm f2.8 At last, a super-wide lens at an affordable price, with excellent edge-to-edge definition.
400mm f5.6 IF Employs Internal Focusing as pioneered by Nikon, within dimensions smaller than many a 300mm.
80-200mm f4 The Mitsuki Compact Zoom. Single-action zoom/focus control. No larger than most 70-150's!

staff wanted

We're looking for staff. Our shops are rather different from the usual, run-of-the-mill retail outlet - we offer high salaries, good holidays and many other benefits.
What can you offer us? Are you as steady as a Gitzo tripod, reliable as a Nikon camera, sharp as a Hasselblad Planar?
We'd like to hear from you. Talk to Mr Swan on 01-602 1491.

Starblitz

3000BT-TWIN

A revolutionary new gun from Starblitz which has 2 separate flash heads and full 2-stop computer operation for absolute lighting control. The main head (GN 30 at 100 ASA) has click-stop bounce settings up to 90°, and this may be used with or without the sub-flash for frontal fill-in illumination. Power is supplied by 4 MN1500 size penlight cells or NiCads, and the circuitry is Thyristor controlled to save energy.

ACCESSORIES
Supplied with the Starblitz 3000BT-Twin are the following items: **Flash Synch Cable** for use with off-camera operation, **Wide Angle Attachment** so that the unit may be used with lenses as wide as 28mm (this accessory also gives a softer lighting effect to normal flash pictures) and a **Colour Filter Set** consisting of 3 filters—orange, red and green for special effects.

The Tecno Catalogue is free with the last issue each month of Amateur Photographer.

Please read this!

Here follow our Terms of Business:

Payment. You can pay cash in pounds Sterling or any other recognised currency.

Access and Barclaycards are acceptable up to any amount, but there is a floor limit above which we have to make a phone call.

Cheques on UK banks are acceptable either with a banker's card (up to £50) or not. If you pay by cheque without banker's card, we either have to make a phone call to verify it or else clear it in the usual way.

Travellers cheques from any country are OK, and so are bank drafts from foreign banks made payable to us. We would not normally be able to accept an ordinary cheque drawn on a foreign bank.

If you have Eurocard or Visa or Mastercard credit cards, you can use them at our stores (they're the same as Access and Barclaycard). We do not operate charge accounts, hire purchase or instalment plans.

Opening Hours. Our stores are open from 9.00am to 5.30pm Monday to Friday, and 9.00am to 5.00pm on Saturdays. We close on most Public Holidays.

Goods Subject to Availability. We undertake to supply from stock or obtain for you to special order any item listed in the current Tecno catalogue. However, we cannot guarantee availability as this may be beyond our control. Similarly, there may be delivery delays on some items, although we do carry massive stocks to avoid this where possible.

Prices Subject to Change. In an ongoing inflation situation, something or other goes up in price in every week's issue of *Amateur Photographer*. However, we will try our best to hold all our selling prices during the 2 month life of this catalogue.

This cannot be absolutely guaranteed - hence the proviso 'prices subject to change'.

TAX-FREE EXPORT

Most of our prices include 15% tax. But tourists can avoid paying this by our 'Over the Counter' scheme. Please remember to bring your passport.
